			ART UNIT 3788	PAPER NUMBER
			MAIL DATE 01/19/2011	DELIVERY MODE PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/553,497	ABBOSH ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	KING M. CHU	3788	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 24 November 2010.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 3,5,9,10,12-14,23-25,29-32 and 34-38 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 3,5,9,10,12-14,23-25,29-32 and 34-38 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \*    c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### **Continued Examination Under 37 CFR 1.114**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/22/2010 has been entered.

### **Claim Rejections - 35 USC § 112**

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 3, 5, 9-10, 12-14, 23-25, 29-32, 34-38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In reference to Claim 9, Applicant cited "consisting of a disposable wipe product comprising..." It is unclear whether applicant intends to keep the claim open or closed. From Claim 12, the addition of the dispenser is evident that Claim 9 is open. For the purpose of examination, Claim 9 is considered to be open.

### **Claim Rejections - 35 USC § 103**

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3788

5. Claims 3, 5, 9-10, 12, 23-24, 29-30, 32, and 34-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franco (2,823,089) in view of Markovics (4,627,640).

In reference to Claim 9

Franco discloses a convenience device consisting of a disposable wipe product (tissue 10) comprising an elongate web of absorbent material (see Figure 1, (column 1 lines 48-51)) comprising a multiplicity of individual portions (11) integrally connected together in series (see Figure 1) wherein the multiplicity of individual portions each have a generally circular shape (see column 1, lines 64-68), with the elongate web having an overall width (axis running from top of Figure 1 to the bottom of Figure 1), with each of the multiplicity of individual portions having a length along a longitudinal axis of the elongate web (axis parallel to 14, see Figures 1-2), wherein each of the multiplicity of individual portions has an area that is less than a product of the overall width across the elongate web multiplied by the length along the longitudinal axis of the elongate web (see Figure 1 and 2, where the area of each individual portions 10 is less than a product of the overall width across the web multiplied by the length) and wherein neighbouring individual portions are connected together by a frangible zone of material (11a) whose width across the elongate web is small relative to the overall width of the elongate web to act as a controlled breaking point for when one of the multiplicity of individual portions is to be separated from the neighbouring individual portions on dispensing (see Figure 3), wherein the frangible zones connecting the individual portions all lie on the longitudinal axis of the elongate web (see frangible zones 11 lying on the longitudinal axis running from the top to bottom of Figure 1), wherein the multiplicity of individual portions are

Art Unit: 3788

each folded and while the neighboring individual portions are connected together in series and in the stack only (the individual portions are connected in series in Figure 1 and in the stack by the frangible zone, Figure 2) by the frangible zones of material (see Figures 1-3 where 11a connects the neighboring individual portions i.e. 10a to 10b) located on the curved part of the quadrant shape.

Franco discloses the claimed invention as discussed above and Franco further teach that the square can be replaced by circles of tissue or ovals (col. 1, ll. 64-66) with the exception of the following claimed limitations that are taught by Markovics: the portions are folded about a plurality of diametric fold lines (fold lines A, B, C) are radially extending fold line, see configuration of Figure 7) into a stack with quadrant shape (see Figures 3, 4, and 7) having a curved part (71, after folding of Figure 7)

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics so that the web material of Franco is folded into a stack with quadrant shapes with a plurality of fold lines and the shapes of individual portions 11 are changed to the circular shape with fold lines A, B, and C of Markovics for the purpose of ease of manufacture and easier to provide a variety of attractive shapes and configurations, as taught by Markovics (column 1, lines 39-43).

Art Unit: 3788

4,627,640

In reference to Claim 3

Franco in view of Markovics discloses the claimed invention as discussed above for claim 9 and Franco further discloses that the frangible zone is in the form of a single strip of material in a middle section of the web (see Figure 1, 11a).

In Reference to Claim 5

Franco in view of Markovics discloses the claimed invention as discussed above for claim 9 and Franco further discloses the elongate web is folded at the frangible zones between the neighbouring individual portions (see Figure 1 of Franco).

In reference to Claim 10

Franco in view of Markovics discloses the claimed invention as discussed above for claim 9 and Markovics further discloses that the individual portions are folded about the plurality of diametric fold lines in a fan-like pattern (Figures 3 and 4 shows that the diametric fold lines are folded in a fan-like pattern, where Figure 3 and 4 have the same corresponding fold lines of Figure 7).

Art Unit: 3788

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics for reasons stated in claim 9.

In Reference to Claim 12

Franco in view of Markovics discloses the claimed invention as discussed above for claim 9 and Franco further discloses a dispenser (20) containing a convenience device as claimed in claim 9.

In reference to Claim 23

Franco in view of Markovics discloses the claimed invention as discussed above for claim 9 and Markovics further discloses that the plurality of diametric fold lines includes a first fold line extending across a middle of each individual portion at right angles to the longitudinal axis of the web (fold line B which extends through the middle at a right angle to the longitudinal axis), wherein the neighboring individual portions are free of interconnection with each other along the first fold line (when Franco is modified with Markovics, the modified individual portions of Franco will still have the frangible zone 11, where the individual portions will not interconnect with each other along the first fold line).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics so that a first fold line perpendicular to the longitudinal axis is added for reasons stated in claim 9.

In reference to Claim 24

Franco in view of Markovics discloses the claimed invention as discussed above for claim 23 and Markovics further discloses that the plurality of diametric fold lines

Art Unit: 3788

includes second (A) and third fold lines (C) arranged at an angle of  $45^{\circ}$  to either side of said first fold line on each individual portions (since A and C are at  $90^{\circ}$  to each other and B is the central fold line, A and C are at a  $45^{\circ}$  angle with B, respectively), with each individual portion being folded about the second and third fold lines in a same sense, whilst being folded about said first fold line in an opposite sense (see the fold configuration of Figures 3-4 and 7), wherein the neighboring individual portions are free of interconnection with each other along the first fold line (when Franco is modified with Markovics, the modified individual portions of Franco will still have the frangible zone 11, where the individual portions will not interconnect with each other along the first fold line).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics so that a second and third fold lines are added for reasons stated in claim 23.

In reference to Claim 29

Franco in view of Markovics discloses the claimed invention as discussed above for claim 5 and Markovics further teaches that the plurality of diametric fold lines includes a first fold line (fold line B which extends through the middle at a right angle to the longitudinal axis) extending across a middle of each individual portion at right angles to the longitudinal axis of the web, wherein the neighboring individual portions are free of interconnection with each other along the first fold line (when Franco is modified with Markovics, the modified individual portions of Franco will still have the frangible zone

Art Unit: 3788

11, where the individual portions will not interconnect with each other along the first fold line).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics so that a first fold line perpendicular to the longitudinal axis is added for reasons stated in claim 5.

In reference to Claim 30

Franco in view of Markovics discloses the claimed invention as discussed above for claim 29 and Markovics further discloses that the plurality of diametric fold lines includes second (A) and third fold lines (C) arranged at an angle of  $45^{\circ}$  to either side of said first fold line on each individual portions (since A and C are at  $90^{\circ}$  to each other and B is the central fold line, A and C are at a  $45^{\circ}$  angle with B, respectively), with each individual portion being folded about the second and third fold lines in a same sense, whilst being folded about said first fold line in an opposite sense (see the fold configuration of Figures 3-4 and 7), wherein the neighboring individual portions are free of interconnection with each other along the first fold line (when Franco is modified with Markovics, the modified individual portions of Franco will still have the frangible zone 11, where the individual portions will not interconnect with each other along the first fold line).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics so that a second and third fold lines are added for reasons stated in claim 29.

In reference to Claim 32

Art Unit: 3788

Franco in view of Markovics discloses the claimed invention as discussed above for claim 38 and Markovics further teaches that the diametric fold lines includes a third fold line (43 and 44, see Figure 6) extending across a middle of each individual portion at right angles to the longitudinal axis of the web (see Figure 6) wherein the neighboring individual portions are free of interconnection with each other along the third fold line (when Franco is modified with Markovics, the modified individual portions of Franco will still have the frangible zone 11, where the individual portions will not interconnect with each other along the third fold line).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics so that a third fold line is added for reasons stated in claim 38.

In reference to Claim 34

Franco in view of Markovics discloses the claimed invention as discussed above for claim 9 and Franco further teaches that the web of material is formed of paper (column 1 lines 48-51).

In reference to Claim 35

Franco in view of Markovics discloses the claimed invention as discussed above for claim 34 and Franco further teaches that the disposable wipe product is paper towels (column 1 lines 48-51).

In reference to Claim 36

Art Unit: 3788

Franco in view of Markovics discloses the claimed invention as discussed above for claim 33 and Franco further teaches that the disposable wipe product is wipes (column 1 lines 48-51, facial tissues and toilet tissues are considered wipes).

In reference to Claim 37

Franco in view of Markovics discloses the claimed invention as discussed above for claim 33 and Franco further teaches that the web of material is formed of cleaning or hygienic material (column 1 lines 48-51, facial tissues).

In reference to Claim 38

Franco in view of Markovics discloses the claimed invention as discussed above for claim 9, wherein the plurality of diametric fold lines includes first (A) and second fold lines (C), with the first fold line extending at an angle of 45 degrees to the longitudinal axis of the body (see Figure 7 above), with the second fold line extending at an angle of 90 degrees to the first fold line (see Figure 7 above), wherein neighboring individual portions are free of interconnection with each other along the first and second fold lines (when Franco is modified with Markovics, the modified individual portions of Franco will still have the frangible zone 11, where the individual portions will not interconnect with each other along the first and second fold line).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics so that a first and second fold lines are added for reasons stated in claim 9.

Art Unit: 3788

6. Claims 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franco (2,823,089) in view of Markovics (4,627,640) and further in view of Harsanyi (5,803,249).

In reference to Claim 13

Franco in view of Markovics discloses the claimed invention as discussed in claim 9 with the exception of the following claimed limitations that are taught by

Harsanyi: two or more separate compartments each for holding the stack (see abstract).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics and further in view of Harsanyi so that dispensing of wet sterilizing towelettes and dry towelettes can be achieved, as taught by Harsanyi (column 1, lines 14-16).

In reference to Claim 14

Franco in view of Markovics discloses the claimed invention as discussed in claim 9 with the exception of the following claimed limitations that are taught by

Harsanyi: one of the two or more separate compartments holds a dry stack and another of the two or more separate compartments holds a moist or wet stack (see abstract).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics and further in view of Harsanyi for reasons stated in claim 13.

7. Claims 25 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franco (2,823,089) in view of Markovics (4,627,640) and further in view of Abbosh (D447,346 S).

In reference to Claim 25

Art Unit: 3788

Franco in view of Markovics discloses the claimed invention as discussed above for claim 24 with the exception of the following claimed limitations that are taught by Abbosh: a diametric fold line (see Fold line at the middle and across the paper tower in Figure 1) aligned with the longitudinal axis of the web (modified to the invention of Franco in view of Markovics), with each individual portion folded in a fan-like pattern (After the modification in view of Abbosh, the fold lines formed are capable of being folded in a fan-like pattern), wherein the neighboring individual portions are free of interconnection with each other along the fourth fold line (when Franco is modified with Markovics and further in view of Abbosh, the modified individual portions of Franco will still have the frangible zone 11, where the individual portions will not interconnect with each other along the fourth fold line).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics and further in view of Abbosh so that a fourth fold line is added along the longitudinal axis of the web in order to further provide an additional fold line for shaping and stacking of paper towel products, as taught by Abbosh (see the description of Figure 10).

In reference to Claim 31

Franco in view of Markovics discloses the claimed invention as discussed above for claim 30 with the exception of the following claimed limitations that are taught by Abbosh: a diametric fold line (see Fold line at the middle and across the paper tower in Figure 1) aligned with the longitudinal axis of the web (modified to the invention of Franco in view of Markovics), with each individual portion folded in a fan-like pattern

Art Unit: 3788

(After the modification in view of Abbosh, the fold lines formed are capable of being folded in a fan-like pattern), wherein the neighboring individual portions are free of interconnection with each other along the fourth fold line (when Franco is modified with Markovics and further in view of Abbosh, the modified individual portions of Franco will still have the frangible zone 11, where the individual portions will not interconnect with each other along the fourth fold line).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Franco in view of Markovics and further in view of Abbosh so that a fourth fold line is added along the longitudinal axis of the web in order to further provide an additional fold line for shaping and stacking of paper towel products, as taught by Abbosh (see the description of Figure 10).

### **Response to Arguments**

8. Applicant's arguments filed 11/22/2010 have been fully considered but they are not persuasive. In view of applicant's amendment, the search had to be updated and the rejections were modified to accommodate the newly amended limitations.

9. Applicant argues that Markovics fails to teach how to fold a web of materials. Franco in view of Markovics teaches the claimed invention and Markovics does show the folding methods (see folds in Figures 4 and 5, where the fold lines of Figures 4 and 5 corresponds to the fold lines of Figure 7).

10. In response to applicant's argument that Markovics is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be

Art Unit: 3788

reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, an inventor considering different fold methods and folds for disposable paper products would naturally look to references employing other “paper folds, album cover folds, pop-up type books, etc.” which in that case came from areas such as “cassette storage, storage for discs/albums, books, binders, etc.” In *re* *ICON Health and Fitness, Inc.*, 496 F.3d 1374, 1380 (Fed. Cir. 2007) (citing *In re Paulsen*, 30 F.3d 1475, 1481 (Fed. Cir. 1994).

11. In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

12. In response to applicant's argument that there is no teaching, suggestion, or motivation to combine the references, the examiner recognizes that obviousness may be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988), *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992), and *KSR International Co. v. Teleflex, Inc.*, 550 U.S. 398, 82 USPQ2d

Art Unit: 3788

1385 (2007). In this case, applicant believes that the combination would not be obvious to one of ordinary skill in the art. Franco teaches that different shapes can be used for its individual portions. One would naturally look to other fold methods to accommodate these different shapes, and would arrive at Markovics' reference.

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KING M. CHU whose telephone number is (571)270-7428. The examiner can normally be reached on Monday - Friday 8AM - 5PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ehud Gartenberg can be reached on (517)272-4828. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
